Dayshawn Terry

Houston, TX (open to remote)
708-369-4281 • Dayshawn21@gmail.com • LinkedIn, GitHub

Front-end software engineer with 5 years of experience building enterprise React and TypeScript applications, most recently as the sole front-end developer of a 30-module healthcare analytics and compliance platform handling PHI. Strong in reusable component libraries, data-heavy dashboards and reporting, role-based navigation, real-time UIs, and API integration. Healthcare domain experience across dental practice management, coordination of benefits, federal reporting, and EDI. Comfortable across the stack with Python/FastAPI and SQL, with additional C#/.NET experience, and building LLM features with the Claude API.

Core Competencies

- **Front-End**: React, Next.js, TypeScript, JavaScript, Redux Toolkit, TanStack Query, React Router, Blazor, Fluent UI, HTML, CSS, SCSS/Sass, Chart.js, Power BI Embedded.
- **AI**: Claude API (tool use, streaming, evals), Claude Code, OpenAI Codex.
- **Integration & Security**: REST APIs, SignalR/WebSockets, SSE, OAuth 2.0/OIDC, Azure AD B2C/MSAL, role-based access control.
- **Backend & Data**: Python, FastAPI, SQL Server, PostgreSQL, SQLAlchemy, Alembic, C#/.NET.
- **Testing & Delivery**: Playwright, Vitest, React Testing Library, Pytest, Git, Vite, GitHub Actions, Azure DevOps Pipelines, Azure App Service.
- **Cloud (AWS)**: S3, CloudFront, API Gateway, Lambda, DynamoDB, IAM, CloudWatch (hands-on demo project, set up by hand in the console).

Professional Experience

Visualutions — **Houston, TX**
Front-End Developer — *Oct 2021 - Oct 2026*

Delivery process, across projects
- Worked in an Agile team, promoting changes from Dev to UAT to Production branches, and added features and fixed bugs in production.

Saber Healthcare analytics and compliance application (PHI), sole front-end developer, React / TypeScript
- Sole front-end developer, with one backend developer, on a 30-module application serving 400+ users across 50 tenants; owned architecture, conventions, code-quality standards, and end-to-end and integration tests.
- Built 55+ reusable UI components and an 18-rule validation framework shared by all 30 modules.
- Designed UI, workflows, and Power BI Embedded dashboards with analytics staff, and integrated 230+ REST API endpoints behind OIDC single sign-on.
- Implemented permission-driven navigation and routing for 50+ access controls.
- Replaced manual refreshes with live progress updates (SignalR, Redux) and built streaming exports so 100K+ row reports download without overloading browser memory.

Dental Practice Platform, 100+ dental offices, React / Redux Toolkit
- One of 4 original front-end developers, joining before launch; gathered requirements directly from customers.
- Built report pages with shared filter, table, and CSV export components over the C# API, and admin pages for users and roles, locations, providers, fee schedules, insurance plans, and settings, with role-based access.
- Built the UI for three federal UDS clinical measures tables and four-payer coordination of benefits, behind a feature flag.

Beacon, Blazor / C#/.NET
- Developed a Blazor and C#/.NET practice management module within a 15-contributor solution.
- Aligned menu visibility with route authorization policies and added tests verifying role-based access.
- Independently implemented a versioned EDI encoder producing fixed-width output for healthcare data exchange.

- **Independent project** **Live demo, GitHub**
  Photography Site on AWS, Serverless Demo *Nov 2026*
  - Hosted a React site on a private S3 bucket behind CloudFront with Origin Access Control, with custom error responses so client-side routes survive a refresh.
  - Built a Node.js (TypeScript) Lambda behind an API Gateway HTTP API (CORS restricted to the site's domain, throttled to 5 requests per second) that validates the contact form and writes inquiries to DynamoDB under a least-privilege IAM role, with logs in CloudWatch.
- **Independent project** **Live app, GitHub**
  Lineform, Sports Analytics Platform *Mar 2026 - Present*
  - Built and deployed Ask Lineform, an AI chat assistant on the Claude API with a hand-written tool-use loop over the app's services, streaming answers to a React drawer over SSE with spend limits on the live endpoint.
  - Wrote a 30-case eval suite (83% baseline pass rate, about $0.02 per full run) and triaged every failure.
  - Built and deployed the full-stack platform (React 19/TypeScript, FastAPI, PostgreSQL on Neon, Render) covering schedules, player projections, game detail, and model track records for tennis, NFL, NBA, and NHL.
  - Validated every model on held-out seasons (e.g., 12,068 tennis matches) under pre-registered evaluation rules.
  - Automated 17 scheduled GitHub Actions ingest jobs from 8+ providers (including Playwright scraping) into a 50-migration PostgreSQL schema.
  - Moved heavy report builds into scheduled jobs to keep the API within a 512 MB host, and fixed endpoint timeouts by replacing N+1 queries.
  - Wrote about 5,600 automated tests (Pytest, Vitest) run in CI with typecheck, build, and gitleaks secret scanning; verified UI changes in a real browser with Playwright.
- **Independent project** **Live demo, GitHub**
  Sports Analyst Agent *Nov 2026*
  - Built a Next.js and TypeScript chat app where Claude answers sports questions with live data through tool use, using a hand-written agent loop capped at 6 steps and streaming typed events to the browser.
  - Hardened the chat route with per-client rate limits, a byte-counted request size cap, and Zod validation of the resent conversation (known tools only, paired tool results), with an optional shared Redis rate limiter.

Education

- **St. Ambrose University**
  B.A., Computer Investigation and Criminal Justice *2012*
