Dayshawn Terry

FRONT-END SOFTWARE ENGINEER | REACT | TYPESCRIPT | BLAZOR

708-369-4281 | Dayshawn21@gmail.com | linkedin.com/in/dayshawn-terry

PROFESSIONAL SUMMARY

Front-End Software Engineer with 4+ years of experience building enterprise web applications using React, TypeScript, and Blazor. Focused on reusable UI components, data-heavy dashboards, complex business workflows, and API integration. Supporting backend experience in C#/.NET, Python, and SQL, with independent full-stack development of a sports analytics platform.

TECHNICAL SKILLS

Front-End: React, TypeScript, JavaScript, Blazor, Redux Toolkit, React Router, Fluent UI, HTML, SCSS/Sass, Chart.js

UI Integration & Security: REST APIs, SignalR/WebSockets, OAuth 2.0/OIDC, Azure AD B2C/MSAL, role-based access control, Power BI Embedded

Backend & Data: C#/.NET, Python, FastAPI, SQL Server, PostgreSQL, SQLAlchemy, Alembic, XGBoost

Testing & Delivery: Vitest, React Testing Library, Pytest, Git, Azure DevOps Pipelines, Azure App Service, GitHub Actions, Vite, ESLint/Prettier, WCAG/accessibility

PROFESSIONAL EXPERIENCE

Visualutions | Front-End Developer | Oct 2021 - Oct 9, 2026

Saber | Internal analytics and compliance application | React / TypeScript

- Served as primary author of a React and TypeScript application spanning 30 modules, establishing shared application architecture and code quality standards.
- Built 55+ reusable UI components and an 18-rule validation framework used across 30 modules.
- Partnered with analytics staff to design Power BI Embedded interfaces and integrated 230+ REST API endpoints with OIDC single sign-on.
- Implemented permission-driven navigation and routing for 50+ access controls across admin and tenant roles.
- Delivered live progress updates through SignalR and Redux, removing manual refreshes; implemented streaming exports to reduce browser memory usage.

Dental practice platform | Patient, financial, and reporting modules | React

- Developed data-heavy reporting interfaces for an embedded Power BI platform spanning 60+ report types; independently built three federal report tables.
- Implemented coordination-of-benefits functionality for four ranked payers, using a feature flag alongside the existing workflow.

Beacon | Practice management modules | Blazor / C#/.NET

- Led development of a Blazor and C#/.NET practice management module within a 15-contributor solution.
- Aligned menu visibility with route authorization policies and added tests to verify access behavior.
- Contributed backend functionality by independently implementing a versioned EDI encoder for fixed-width output.

INDEPENDENT PROJECT

Sports Analytics Platform | React, TypeScript, Python, FastAPI, PostgreSQL

Independent full-stack project | Mar 2026 - Present

- Built a six-page React and TypeScript client with TanStack Query caching and a typed API layer, plus an admin console for identifying data-quality issues.
- Developed the FastAPI backend and PostgreSQL data model; resolved an N+1 query pattern causing endpoint timeouts by batching database queries.
- Automated five scheduled GitHub Actions jobs to ingest sports and odds data from four external providers.
- Built walk-forward model validation tracking log-loss, Brier score, and AUC with probability calibration.

EDUCATION

St. Ambrose University | B.A., Computer Investigation and Criminal Justice | 2008 - 2012
